

A DYNAMIC KNEE EXAM

Integrating the KneeKG System into your practice provides you with patient-specific conservative care recommendations designed to reduce pain while restoring function.

Reports generated by the KneeKG System combined with the Emovi platform provide treatment recommendations derived from evidence-based literature, which demonstrated significant reduction in pain while improving the knee function. This combined system provides healthcare professionals with the right tools to empower patients in their management of knee pain.

Integrated in the care pathway*, Knee Kinesiology with the KneeKG system has demonstrated:

42% less pain¹

A 2019 randomized clinical trial demonstrated that the KneeKG patient group presented a 42% decrease in pain, while also improving in function and PROMS.

A proactive approach to help health-care providers guide patient-centered conservative care pathway to address mechanical cause of pain.

The KneeKG system is a unique tool for health-care providers to have in order to help them make an objective assessment of their patients' condition and minimizing their liability down the line.

Precision medicine tool enabling healthcare providers to make accurate patient-specific functional assessment

In anticipation of the NOPAIN Act going into effect next year, healthcare providers who focus on the patient-specific causes of pain and dysfunction, and embrace the conservative care pathways will have an advantage in by providing options to restore function, reduce pain, while improving PROMS.
